SAFE

SAFe DevOps Certification Training

Course Overview

Phoenix TS' two (2) day SAFe DevOps certification boot camp provides a comprehensive overview for understanding the DevOps competencies needed to accelerate time-to-market by improving the flow of value through the Continuous Delivery Pipeline. Attendees will map the current value stream through their delivery pipeline from idea to cash, and identify practices that will eliminate bottlenecks to flow.

The course will build an understanding of the complete flow of value from Continuous Exploration to Continuous Integration, Continuous Deployment, and Release on Demand. Attendees will explore SAFe's CALMR (Culture, Automation, Lean, Measure, Recover) approach to DevOps, which helps create a culture of shared responsibility for the full spectrum of Solution delivery. It helps align people, processes, and technology throughout the organization to achieve faster time-to-market.

Attendees will leave with the tools they need to execute an implementation plan for improving their delivery pipeline, and the knowledge they need to support the plan. Attending the class prepares individuals to take the exam and become a certified SAFe® DevOps Practitioner (SDP).

Course Objectives

In this Course, You Will:

- Understand the CALMR approach to DevOps is, why it is so important, and be able to explain it to others
- Understand the importance of continuous integration, continuous testing, and be ready to apply it
- Apply the concepts of continuous security
- Map their current delivery pipeline
- Measure the flow of value through the delivery pipeline
- Improve the process of exploring customer needs
- Improve the release process
- Improve the process of developing, building, and integrating continuously
- Improve the process of continuously deploying to staging and production environments
